

Georgi Ivanov

Full-Stack Web Developer

Varna, Bulgaria
g.ivanov.ivanov95@gmail.com
givanov95.github.io
github.com/givanov95

Full-stack developer with **7+ years** of experience building production business web apps — workflow systems, warehouse management, e-commerce — with **Laravel, Vue and Inertia**, and more recently **NestJS and Next.js**. I work across the whole stack, from database and APIs to the UI, and maintain a set of reusable Laravel/PHP packages and starter templates that speed up every new project.

EXPERIENCE

Full-Stack Web Developer · James IT Services, Varna

01/2022 – present

Custom business web applications for clients, built on Laravel and an in-house PHP framework.

- Part of the team that built a **Laravel + Inertia + Vue 3 SPA** for a bank-valuers' workflow: roles and permissions, real-time (WebSocket) notifications, REST APIs and PHP tests.
- Developed workflow systems on the in-house PHP framework — company-strategy management, municipal caregiver management, car listings and bids — including authentication, authorization, APIs and live notifications.
- Helped develop the in-house PHP framework itself — the shared base (Twig templating, authentication, authorization, Ajax/JSON endpoints) behind several client projects.

Stack: PHP, Laravel, Inertia, Vue 3, React, MySQL, Tailwind CSS, Vite / Webpack, Git

Full-Stack Web Developer · Doors Bulgaria, Varna

11/2020 – 01/2022

- Contributed to a **warehouse-management system** in Laravel: stock transfers, orders and item tracking within and between warehouses, an admin panel with granular permissions, DB transactions.
- Maintained and extended the sales, claims and installation software used by the company's shops.

Stack: PHP, Laravel, MySQL, Blade, JavaScript / AJAX, Bootstrap

Junior Web Developer · J & F Style, Varna

08/2020 – 11/2020 · fixed term

- Worked on a bulk Viber/SMS messaging platform and on automation that accepts orders from several web platforms.

Stack: JavaScript, jQuery, Bootstrap, Twig, Webpack

Junior WordPress Developer · Internet Reklama, Varna

04/2019 – 05/2020

- Built and customised WordPress sites and WooCommerce stores, redesigning ready-made themes; supported and extended e-commerce sites.
- On-site and off-site support of digital-marketing campaigns, SEO and SEO tooling.

SKILLS

Backend	PHP, Laravel, NestJS, Node.js, REST APIs, WebSockets, MySQL, Prisma
Frontend	TypeScript, JavaScript, Vue 3, Inertia, Next.js, React, Tailwind CSS
Tooling	Git, GitHub Actions, Docker, Linux, Apache, Composer, Vite
Also	WordPress / WooCommerce, Blade, Twig, SEO fundamentals

OPEN SOURCE & SELECTED PROJECTS

Laravel / PHP packages

github.com/givanov95

Seven repositories with 40+ tagged releases — six packages on Packagist and two companion Vue packages on npm — used across my own projects:

- **laravel-data-table** — server-side DataTable builder for Laravel with a Vue 3 + Inertia frontend: search, ordering, relation and translatable columns, custom query hooks, slots for custom cells. [Packagist + npm](#)
- **laravel-roles-permissions-crud** — admin CRUD for roles & permissions on top of spatie/laravel-permission: controllers, form requests, a route macro and ready-made Vue 3 components. [Packagist + npm](#)
- **typed-http** — typed, object-oriented HTTP client for PHP 8.2+ on PSR-18: one Connector per API, one Request class per call, typed DTO responses, authentication, retries and JSON / form / multipart / XML bodies; optional Laravel bridge. [Packagist](#)
- **laravel-translations** — multi-locale infrastructure for Laravel + Inertia + Vue: polymorphic translations, a *HasTranslation* trait, a cached translator service and locale middleware. [Packagist](#)
- **laravel-attachments** — polymorphic file and image attachments with *HasImages* / *HasFiles* traits and multi-section support. [Packagist](#)
- **laravel-git-hooks** — a Composer plugin that installs a pre-commit quality gate for Laravel + Vite apps. Paired with **ci-workflows** — reusable GitHub Actions workflows that enforce the same gate in CI. [Packagist](#)

Laravel Starter & Shop

[private repos](#) · [code walkthrough on request](#)

A reusable Laravel base template and a full multilingual e-commerce platform built on it, with a clean, extendable architecture. [Laravel](#) · [Vue](#) · [MySQL](#)

NestJS + Next.js starter

[private repo](#)

Full-stack TypeScript monorepo — NestJS API, Next.js frontend and Prisma, with shared Zod-typed contracts across the stack. [NestJS](#) · [Next.js](#) · [Prisma](#) · [Zod](#)

Appointment booking for a medical practice

Website and online booking application with a dynamic calendar and an admin panel for managing available days and hours; SEO and page-speed optimisation. [PHP](#) · [MySQL](#) · [JavaScript](#)

WordPress shops and plugins

Custom-theme WordPress online shops with a lightweight custom shop running alongside WooCommerce and Speedy courier API integration; two custom plugins — order printing with VAT calculation, and frame pricing. [WordPress](#) · [PHP](#) · [JavaScript](#) · [REST API integration](#)
